

DRYWALL & BOARD TELE-PROPS

TELE-PROP BOARD JACK

- adjustable height prop with lever jack
- maximum 45kg lift
- gives a precise & controlled vertical lift
- jack & prop up boards and panels
- allows single handed panel fixing
- fix temporary battens
- use to put up polythene screens
- reliable German made lifting tool

The telescopic quick prop has a sprung quick release head that springs into position after triggering the release button

The quick release trigger springs the top plate up into position to meet the ceiling, joist, batten or board

The top and bottom plates have swivel ball joints that allow the prop to be fixed in position at an angle up to 50°

The manual height adjustment knob allows the prop to be set to the approximate height to be used

The power lever can be used to increase the pressure on the prop head to give a precise extension height and clamping pressure

The tele-props are also used to hold dust sheets or polythene sheeting in place to restrict dust circulation
