## XD171 COMPACT DUSTEX VAC

- powerful by-pass three stage motor
- large area primary filter
- add-on pre-separator for heavy dust volumes
- reduced hazards through airborne dust
- effective dust control for fine dust residues
- produced by Refina in the UK

Dustex vacs will control dust at source to give a cleaner and more professional working environment as required by main contractors and authorities. Health hazards caused by noxious particles are reduced

The improved XD171 is a 1500 watt compact dust extraction vac for the efficient collection of plaster, concrete, stone, wood and surface prep residues. It is for use with concrete cutters, grinders, sanders and paint strippers

It has a hi-flow three stage, by-pass vacuum motor and teflon primary filter. The unit has a heavy duty rotomoulded vacuum body that will not get dented or damaged

Dust particles are filtered out by the easy to clean primary filter

When coupled to the PC95 pre-separator cyclone, 95% of the dust is removed before it gets to the main filter and is recommended for the contractor expecting to collect more than a builders bucket of dust in a half day shift. Using the PC95 pre-separator and vac to prep plaster walls or drywall joints, reduces down time for filter maintenance. The pre-separator also works well as a water pick collector

The XD171 is supplied with hose and teflon primary filter cone. The pleated central white or hepa filters used with the XD181 can be fitted as an upgrade to the XD171

The XD171S model is fitted with an automatic switch for use with power tools up to 1500 watt; extra cost of £60

### APPLICATIONS

- effective dust control & extraction
- for concrete & stone grinding
- plaster dust & drywall joints
- wood & board sanders
- paint & artex

XD171 Dustex Vac 1500w

Weight 15kg

Size WxL38x43cm

Height 86cm

Hose diameter 38mm

Hose length 3m

Vacuum 235m<sup>3</sup>/hr

**HEPA FILTER AVAILABLE**

## XD181 DUSTEX VAC

- powerful by-pass three stage motor
- twin large area filters
- add-on pre-separator for heavy dust volumes
- reduced hazards through airborne dust
- effective dust control for fine dust residues
- hepa filter available as upgrade
- produced by Refina in the UK

The XD181 vacs use the same motor as the compact XD171 vacs, but have a longer drum body for better internal dust separation allowing the use of Hepa filters

Dustex vacs will control dust at source to give a cleaner and more professional working environment as required by main contractors and authorities

Fitted with hepa filters, the airflow is filtered down to one micron reducing health hazards caused by noxious particles

The advantages of a cleaner work area are clearly visible because of the absence of material residues everywhere. The improved health advantages to the worker are less obvious because the dust particles that are most damaging to one's health are often the smallest particles that are not visible and will pass through a standard dust mask

The XD181 has a hi-flow three stage, by-pass vacuum motor, primary and internal cartridge filters. The vac drum has a heavy duty rotomoulded body that will not get dented or damaged and is produced with heavy duty frame and trolley

The coarser particles are filtered out by the easy to clean pre-filter cone. The pleated central yellow hepa filter removes particles down to below 1 micron

The PC95T pre-separator cyclone with trolley remove 95% of the dust before it gets to the main filter allowing longer periods between filter cleaning

The XD181S model is fitted with an automatic switch for use with power tools up to 1500 watt; extra cost of £60

## APPLICATIONS

- effective dust control & extraction
- for concrete & stone grinding
- plaster dust & drywall joints
- wood & board sanders
- paint & artex

# TWO & THREE MOTOR DUSTEX VACS

## TWO & THREE MOTOR DUSTEX VACS

- powerful bypass motor industrial vacuums
- polyester or hepa filters available
- dust control for power tools & machines
- surface preparation machines & floor sanders
- cleaner & more efficient working environment
- reduced hazards through airborne dust
- three stage high efficiency motors
- hepa filter available as upgrade
- produced by Refina in the UK

These dustex vacs use powerful two and three motor vacuums with a sturdy trolley that fits easily into an estate car

They feature independent bypass vacuum motors, primary teflon coated primary filter and secondary cartridge or hepa filter

The vacs are produced with a primary teflon filter and an inner cartridge filter

The inner cartridge filter which is fitted as standard has a 2 micron filtration; the 1 micron Hepa filter is available as an extra

The PC95T pre-separator cyclone with trolley remove 95% of the dust before it gets to the main filter allowing longer periods between filter cleaning

### APPLICATIONS

- effective dust control
- for concrete grinders
- diamond cutters & routers
- floor & wood sanders
